

Retrofit Weep Hole Cover™ Pest Exclusion Device Connectors

Tech Support / Sales: 800-334-1676
www.tamlyn.com

MATERIAL

Custom injection molded out of polypropylene

SIZE

5"

FINISH

Grey

PACK

40 pcs per box

WEIGHT

0.05 lbs/each, 2lbs/box

FEATURES/BENEFITS

Retrofit Weep Hole Cover™ Pest Exclusion Device - US Patent #6,474,031, US Trademark #3,506,756. Provides efficient management of moisture and air flow, preventing damage caused by freeze / thaw cycles and is the first step in stopping conditions that allow mold to develop, ensuring optimum performance of the walls. Unique patented-shaped design material permits air and water to move through the material.

Fundamental in helping achieve Green Building goal of healthy indoor air quality.

Per www.builditgreen.org products that reduce or eliminate pesticide treatments are considered green. Periodic pesticide treatment can be a significant health and environmental hazard.

Naturally excludes unwanted, allergen and disease-carrying elements from the house without pesticides (most common method for roaches, rodents, snakes, spiders, scorpions and lizards etc. to enter the home is through weep holes). Physical pest barrier very effectively denies access. Application on exterior of home/building minimizes the use of pest control materials indoors. Accepted by US Environmental Protection Agency Energy Star® program in helping achieve better indoor air quality (keeps rodents etc. From entering through the weep holes, dying inside the walls, and releasing odors)
